## The Product

HelixCloudOps is an AI-powered platform that automates cloud management for companies on AWS, acting like an automated fire suppression system: while tools like Datadog alert you to issues, we detect and fix them proactively saving time, cutting costs, and reducing risks.

## Who It's For

Mid-market firms (\$5M-\$100M ARR) with small teams (20-100 engineers, 2-8 DevOps/SRE), multi-region AWS setups, and \$10K-\$50K monthly cloud spend. Also suits growing startups and enterprises across diverse industries including SaaS/tech, fintech, e-commerce, healthcare, manufacturing, retail, media/entertainment, education, insurance, hospitality, automotive, real estate, and more—any business facing cloud ops pains like scaling, compliance, or waste. Buyers: CTOs (for reliability), CFOs (for savings), VPs Ops (for automation).

## Why They Want It

Solves key pains:

- **Ops Overload:** Auto-triages alerts, fixes 60% incidents, cuts on-call burnout—freeing teams for core work.
- **Cloud Waste:** Identifies idle/oversized resources, trims bills 20-30% (\$5K-\$15K/month).
- **Security Risks:** Continuous scans, auto-patches, ensures compliance in weeks.

ROI: Nets \$15K-\$17K/month savings; avoids \$150K/year SRE hires; payback <1 week.

## How It Works

Deploys 5 AI agents into Customers backend. They monitor, analyze, and auto-remediate without oversight. Simple dashboard shows savings, fixes, and health scores.

Future: Expanding to 11 agents and cloud-agnostic (AWS, Azure, GCP) by end-2026.
